SDA DEPTH

by ANALOX

Protecting the **professional diver**

The **SDA is a range of panel/rack mountable atmosphere monitors** originally designed with the commercial diving in mind.

The SDA Depth monitor provides a full colour display of the depth/pressure reading.

The alarm set points and calibration can be achieved using the front panel user interface and the SDA Depth provides audio/visual alarms, optional data-logging and 4-20mA/relay outputs. The monitor interfaces with a pressure sensor provided by Analox or can be set up to interface with a third party sensor which provides a 4-20mA output.

The accuracies supplied by the SDA Depth are compliant with DNV, IMCA, Lloyds, ABS, and ADCi requirements/ guidelines.

Monitoring the depth of diving chambers is vital to the whole operation. Depth readings are also used with the gas readings to calculate the partial pressures to ensure the safety of the divers.

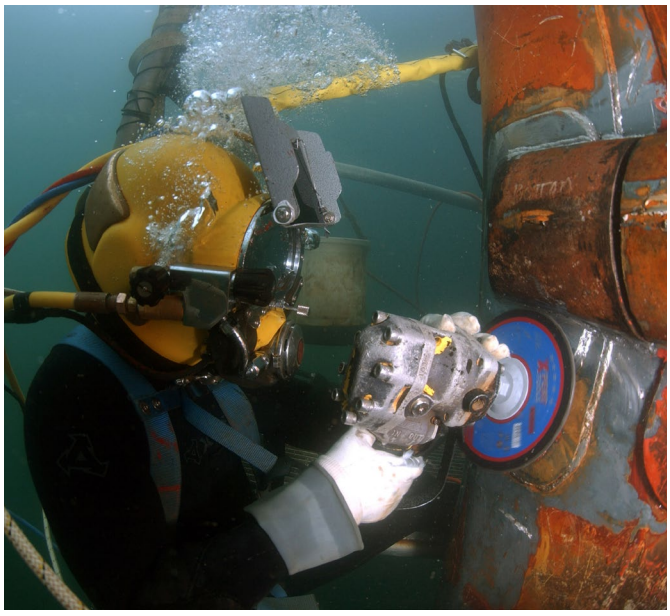

The SDA Depth is normally located in sat/dive control and can be supplied in rack or panel mount configurations. The pressure sensor is mounted in the hyperbaric environment.

Key Features

- Large, bright full colour display in FSW, MSW, BarG or BarA up to 40BarA
- Datalogging option
- Ethernet data output

Applications

- Commercial Diving
